*For the rest of the links, you are the victims of my eclectic interests... see below.*

*I've sorted them into general garden and environmental stuff, then "new uses for plants" that are seriously innovative, then "big" - is just that; then "science" and plant-related discoveries that are very exciting; and finally "ephemera" - tangential stuff that impinge on plants but are not limited to plants. Related materials are grouped together, so that should help. I would suggest scrolling through to see if anything interesting jumps out at you. Watch out for the slugs.*
